How much does that make?

Our brain is a sort of accountant that is constantly—every second—adding up the total of all the information it receives from our senses and our thoughts. If you love your work, your school, your parents or your pet, it's because you have done more + and \times and fewer - and \div ! Think of a part of your life that is a source of pleasure for you now. Why? Isn't it a part of your life where you do a lot of + and \times ? And what happens in those parts of your life that aren't satisfying? Your internal accountant doesn't change how he works: he just keeps summing up the total of what you give him. Monitor what you look at, what you taste, smell, touch, listen to and, above all, what you THINK. Choose only the best ingredients. Your "total" will change automatically. It isn't magic, it's neurologic!
